Number of Pages: 104

Abstract: This publication presents a set of statistical data pertaining to historical changes in total population for small areas in Maryland for ten year intervals from 1930 to 1970. The report is an updated and augmented version of an earlier Department publication covering the period 1930 to 1960. Data for the report were derived from the 1970 Census of Population and Housing together with tabulations from previous Census counts.

The report provides a basic framework for the examination of population growth trends at the election district level in addition to trends for cities and towns within the State. Maps, as well as tables, are used to present a picture of the spatial dimensions of population change from 1950 to 1960 and 1960 to 1970. Maps and tables showing population density by election district have been included, since population density, as well as population growth, is an important factor in facilities and land use planning.

This report was developed in anticipation of an increased demand for fundamental information for various aspects of small area population dynamics. This effort represents a basic step in providing the planning community in Maryland with a comprehensive data base related to the 1970 Census materials.

The Honorable Marvin Mandel
Governor
The State House
Annapolis, Maryland 21404

Dear Governor Mandel:

I am pleased to transmit the enclosed report entitled "Maryland Population: 1930-1970." This report was undertaken to provide basic information on the growth and change of population in the State of Maryland since 1930. The report is based on an earlier document prepared by the Department, updated to include the most recent Census data.

The report presented herein includes population counts for the State, counties and elections districts of Maryland for each Census enumeration from 1930 to 1970. In addition, tabulations of population changes during the last twenty years, as well as 1970 population density, have been incorporated into the report. Numerous maps of the State and counties, showing population density and population changes, are included to assist users of the report.

The report presents Maryland's population in historical perspective over a forty-year period and as such provides an important planning tool to State departments and agencies and to private institutions and individuals. Copies of this report are being distributed throughout the State.

Sincerely,

Vladimir Wahbe
Vladimir Wahbe

Enclosure

INTRODUCTION

The demand for current, as well as historical, population statistics is constantly increasing as both government and private individuals seek to meet the growing needs of Maryland's population. With this in mind, the Department of State Planning has assembled decennial census data collected for each period from 1930 to 1970, the most recent census enumeration.

Population data for the political subdivisions of Maryland and minor civil divisions, or election districts, are provided in this report. In order to facilitate the examination of recent population trends, the percent of population change from 1950 to 1960 and from 1960 to 1970 is included, together with maps showing these changes at the election district level. In addition, maps and tabular material are presented that display patterns of the 1970 population density delineated by election districts.

All incorporated cities and towns and unincorporated places with a population of 2,500 or more persons are listed under the appropriate county with their population for each of the censual years from 1930 to 1970 when such statistics are available.

The Department of State Planning has presented these statistics in a concise form so that users will have ready access to a historical series of population data from which trends and patterns can be identified.

EXPLANATORY NOTES

While terms used in this report are, for the most part, self-explanatory, some further definitions may be of help to the user.

Election districts used in this report are synonomous to minor civil divisions, as defined by the Bureau of the Census, and as such may not always conform to current election boundaries. In most cases, the election districts, or minor civil divisions, are the primary political and administrative subdivisions of a county. Since the boundaries of these areas are rarely changed, they present a convenient framework for the analysis of population change over time.

Population density statistics contained in this report were calculated using total land area figures, rather than total area including bodies of water. It was felt that population density computed for land areas only presents a more realistic picture of population concentration and intensity of land use within the various subdivisions of the State.

In situations where a city or town is not totally contained within one county and a part of its population is located in another county the note "(part)" follows the name of the place. To determine the total population of such places, the user must combine the parts of the population listed separately under the counties in question.

ERRATA

(To be inserted in Maryland Population 1930-1970 By Election Districts, Cities and Towns. Publication No. 171, August, 1971)

Page 4 — Change Cecil County 1970 population (52,291) to (53,291).

Page 12 — Change Anne Arundel County, District 7, percent change in population 1960 to 1970 (228.1%) to (28.1%). Note this correction also on the lower map appearing on page 10.

Page 69 — Change North Potomac (u) (part) to North Potomac (u).

Page 82 — Change St. Mary's County, District 6, 1960 population (3,341) to 3,841). Also change District 6 percent change in population 1960 to 1960 (27.8%) to (46.9%).
